

The RailSync™ Control car accounting service brings much-needed simplicity and stability to the process of tracking car hire expenses.

Part of the RailSync suite of services designed exclusively for Short Line and Regional Railroads, *Control* conforms to all industry practices and reporting requirements. Flexible enough to incorporate your contractual agreements with private equipment owners, *Control* can retrieve and organize information from the RailSync Command module or any other transportation management systems into a series of comprehensive monthly reports.

*Control* makes managing car hire expenses easy.

### Process Your Payables With Precision

*Control* accurately calculates the time and mileage per car movement cycle using data drawn from Command or another TMS. It can then apply the appropriate rate based on the latest information from the Car Hire Accounting Rate Master File (CHARM).

*Control* can also:

- Sequentially process loaded/empty car movement cycles
- Resolve billing discrepancies by using the Liability Continuity System (LCS) to fill in any gaps in event reporting
- Process Transfer of Liability (TOL)
- Produce operational, managerial and financial reports, including summary reports detailing the amounts owed to equipment owners at the end of each service month
- Generate private car and foreign car reports (including TTX)
- Create and send an Electronic Data Interchange (EDI) 414 file encompassing all cycle information to the Car Hire Data Exchange (CHDX)

### Detailed Data, Flexible Formats

For a nominal fee each month, you have the option of receiving an Access or Excel database brimming with depth and detail. You can view the information by car, by customer or by totals. So instead of having to sift through a sea of data, you can zero in on what you need to perform historical comparisons and trending analyses. You can create customized formats for your reports or, if you prefer, we can do it for you.

### Control Customer Support: Always On Call

Like you, we pride ourselves on providing superior service. That's why we offer customer assistance 24x7. *Control's* support team will always be on hand to answer questions and give advice.
