MOBILE COMMAND

Designed exclusively for use by train crews, RailSync™ Mobile Command makes it easy to record car movement events with accuracy while on the road. This rugged field-ready device allows crews to manage track inventory in real-time, resulting in improved event reporting that boosts productivity and increases visibility. Mobile Command synchronizes communication between train crews, office staff and railroad customers to help ensure the perfect delivery of ever-changing work orders.

Benefits

• Increases productivity
• Improves data accuracy and timeliness with real-time event reporting
• Utilizes field-proven wireless hardware with rough shock-proof design
• Synchronizes with RailSync Command
• Displays data in a rich Windows-like user interface

- Graphical car representation
- Graphical load/empty status
- Graphical hazmat indicator status

• Provides an intuitive interface for easy implementation and use
• Adheres to industry standards

Features

• Retrieve and view switch lists, online inventory, stations/locations, and patrons for moves
  • View detailed car characteristics
  • Determine switch list moves required
  • Indicate moves for one or more cars
  • Move cars using a step-by-step wizard
  • Review "intelligent" move type recommendations
  • View completed switch list tasks
• Report in real-time – improve accountability and increase revenue

Communication Support

• Communicate via the multiple connectivity options supported
  • Cellular
  • 802.11 b/g
• Record moves and send through auto-detected network
• Prioritize automated connection selection
• Complete work with or without a connection
• Queue information and send it to the system once a connection is automatically re-established

Here's a Typical Day:

Download Switch Lists

• Display all available switch lists - organized into stations, tracks and cars
• Select the switch lists to work
• Download updated switch lists on demand in sync with Command

Work Switch Lists

• Select one or more cars to move
• View details on individual cars

Move Cars

• Move cars using an intuitive step-by-step wizard
• Select the type of move performed, the time, and the new station and location
• Record standard move types
• Move cars even without a connection present

Report Work to Command

• Synchronize switch moves between wireless device and office Command users
• Reduce the number of hours spent by conductors/engineers to update these lists at the end of the day

Rail Logistics. Real Easy.
